PROFILE

Foundation program student at INTO Manchester, content creator, and junior software developer. My passion for technology, in pair with my self-taught ability, allows me to hold advanced knowledge of video editing, music production, and the basics of software development.

Currently, I am developing my programming skills, specifically JavaScript and Python. I was always interested in Artificial Intelligence and machine learning, and I know these powerful tools will take humankind to the next level.

I am currently managing a blog focused on students and how tech can make their life easier. Also, I have plans on starting a podcast related to technology. Finally, my YouTube channel is not active yet, but I hope to start making tech-related videos by 2022.
